REASONS FOR ALLOWANCE

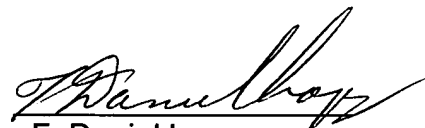

Independent claims 1 and 5 claim a wrist pin having "a kurtosis value that is inversely proportional to said surface roughness such that the product of said Kurtosis value and said surface roughness is between about 0.3 microns and 0.6 microns". Applicant's discussion of this limitation was helpful. A different definition of inversely proportional, equivalent to applicant's definition, is that a product of two variables that are inversely proportional to each other is a constant. The above limitation is understood to mean that any area on the outer surface of the wrist pin can have its kurtosis value and surface roughness measured, and, when these two values are multiplied together, result in a same constant as for all other areas (i.e. no area has a product different from this constant) on its outer surface (the inversely proportional limitation), and that this constant falls around the range of 0.3 - 0.6 microns. None of the prior art, separately or together, teaches this limitation for a wrist pin, having the other limitations of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, preferably **accompanies** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
